Sprint 1 Deliverable Summary

Case Study Title: Smart Connect Portal

A full-stack portal for students and job seekers to register, explore companies, attend virtual job fairs, apply for jobs, and interact with recruiters through sessions and chat.

Sprint Details

Sprint Number: 1

Sprint Pod Name: Smart Connect Portal

Pod Members:

1. Mohammed Aqeel Yousuf
2. Neha Ram Kulkarni
3. Omkar Ganesh Mahangare
4. Priyanka
5. Raffat Parveen Abdul Nabi Khan
6. Rupkatha Maity

Submission Date: [18-06-2025]

Sprint Goal

To design and implement the foundational layout and navigation for the Smart Campus Connect Portal, including a fully functional welcome page, login page, signup page, student dashboard, admin dashboard, feedback form and validation with responsive UI.

User Stories

Role	User Stories	Acceptance Criteria
User(Student)	As a student I want to visit the website , get to know about the website, and register to the website.	1. The landing page shows a short description of the website. 2. There is a visible "Register" button. 3. A simple registration

		form is available. 4. The form checks for missing or incorrect input (e.g., empty fields or wrong email format). 5. After successful registration, the student is redirected to the website home page
User(Student)	As a student , I want to see about the events and the announcements.	1. The homepage shows a list of current events and announcements. 2. Each event/announcement has a title, date, and short description. 3. The student can view this section easily without confusion. 4. The latest announcements are shown at the top.
User(Student)	As a student, I want to share my experience as feedback.	1. A feedback form is available on the website. 2. The form has fields to write the experience. 3. The form shows a message if required fields are empty. 4. A confirmation message appears after submitting feedback.
User (Admin)	As an Admin , I want to register on the website in an admin role.	1. A separate admin registration page or form is available. 2. The form includes

		name, email, and password fields. 3. On submitting the form, the admin account is created with admin access. 4. Admin is redirected to the admin dashboard after successful registration.
User (Admin)	As an admin, I want to post about announcements and events for students.	1. Admin can “Post Event” or “Post Announcement” using button on their dashboard/homepage. 2. Admin can add a title, date, and description. 3. Posted events/announcements are shown to all registered students.

Tasks

Member 1: GitHub Repository & Version Control Setup

- As a team lead, created a GitHub repository to centralize code for collaboration.
- As a developer, defined a clear branching strategy so each member can work without conflicts.
- As a team member, invited others to the repository to enable version control for all tasks.
- As a collaborator, ensured README files are added to maintain clarity.

Member 2: Responsive Landing Page and Dashboards using HTML5 and CSS3

- As a developer, developed the **landing page** using HTML5 to introduce and summarize the platform's purpose and key features.

- As a developer, built the structure for both **student and admin dashboards**, allowing other members to plug in their features.
- As a developer, implemented **navigation flow** between pages using clean folder structure and relative links.
- As a designer, used **CSS3 and Bootstrap 5** to style all pages and ensure full responsiveness across screen sizes.
- As a designer, customized components like buttons, cards, and text to maintain brand consistency and improve UX.
- As a designer, added interactive Bootstrap cards on the landing page and inside dashboards for announcements/events.

Member 3: Create the Navigation bar and footer using Bootstrap 5

- As a developer, developed a **responsive navigation bar for Landing, Login, and Signup pages**, so users can easily navigate between these pages with options for Login and Signup buttons.
- As a designer, have ensured that the navbar includes a **logo on the left and Login/Signup buttons on the right**, maintaining a clean design that adjusts well on different screen sizes.
- As a developer, have created a **footer for the Landing, Login and Signup pages** including links to Privacy Policy, Terms of Service and Contact Us, with responsive design.
- As a developer, have built a **vertical sidebar navigation for both Student Dashboard and Admin Dashboard**, containing relevant links.
- As a designer, have ensured that the vertical sidebar has a clean and accessible layout using Bootstrap.

Member 4: Build a Responsive Announcements Section (Cards/Grid)

- As a developer, created a **responsive announcements section**, so that the announcements can be displayed in an organized and mobile-friendly layout..
- As a developer, built **announcement cards** that display key details such as the **announcement title**, **description**, **tags** (e.g., **General**, **Academic**, **Events**), and the **creation date**, so that users can easily understand and categorize each announcement.

- As a developer, added a **Add Announcement button**, which allows admin to submit new announcements, and a **Delete button** on each card for the **admin** to remove announcements when necessary.

Member 5: Add a modal-based feedback form using JavaScript

- As a developer, created a feedback form with: a **dropdown** for feedback categories (e.g.,, Events, Announcements), a **text box** for the subject, a **textarea** for the detailed feedback and a submit **button** element, so that the user can provide structured and descriptive feedback.

- As a developer, created the form in such a way that it will display a **confirmation message** (e.g., an alert, toast, or modal) after the **feedback is successfully submitted**, so that the user knows the submission was received by the system.

- As a developer, created the form such that it will **reset** all form fields (dropdown, subject input, and description textarea) using JavaScript after a successful submission, so that the form is cleared and ready for a new input.

Member 6: Implement form validation using Vanilla JS and Bootstrap classes.

- As a developer , implemented **input validation and clear error messages** for login and signup forms (e.g., invalid email, empty password, invalid password) using javascript.

- As a developer, created the **Feedback form for users using HTML,CSS, Bootstrap Classes.**

- As a developer, showed **all the errors** as if the email entered during login already exists or any password is not matched using javascript.

- As a developer, added **validation to the feedback form** as empty form can't be submitted, maximum word for the subject , show errors for empty or invalid inputs.

2. Deployment link: https://smartconnectportalsprint1.netlify.app/

Planned vs Delivered

Planned:

- Set up **GitHub repository** and branching strategy using Git.
- Design the **Homepage layout** using HTML5 and CSS3.
- Create the **navigation bar and footer** using Bootstrap 5.
- Build a responsive **announcements section (cards/grid)**.
- Add a modal-based **feedback form** using JavaScript.
- Implement **form validation** using Vanilla JS and Bootstrap classes.

Delivered:

- **GitHub repository** was successfully set up with a clear branching strategy, allowing seamless collaboration and version control across all tasks.
- **Homepage layout** was designed using HTML5 and CSS3, ensuring a modern and responsive structure.
- **Navigation bar and footer** were created using Bootstrap 5, with a responsive design, including a logo and functional login/signup buttons.

- **Responsive announcements section** was built using Bootstrap's grid system, with cards displaying key information such as title, description, tags (General, Academic, Events), and the creation date.
- **Modal-based feedback form** was added using JavaScript, with smooth transitions and a user-friendly design.
- **Form validation** was implemented using Vanilla JS and Bootstrap classes, ensuring the forms are functional, user-friendly, and error-free.

Challenges Faced

- Aligning on a consistent UI design across multiple.
- Understanding and configuring Git branches correctly in a team .
- Limited familiarity with Bootstrap 5 utility classes .
- Managing layout responsiveness across devices in early iterations

Learnings

- Improved collaboration using Git and branching.
- Enhanced understanding of responsive design principles with Bootstrap.
- Practical experience integrating JavaScript for dynamic UI.
- Better planning and task distribution using a structured sprint approach

---

Sprint 1 Retrospective Notes

What Went Well

- GitHub collaboration worked smoothly after the initial setup.
- UI components were implemented with consistency using Bootstrap 5.
- Team communication was effective through regular sync-ups.
- Most tasks were completed on time and met the sprint goal.

What Didn't Go Well

- Some members faced initial challenges using Git branching and merge practices.

- Minor delays occurred due to confusion over responsive layout implementation.
- Integration between components was delayed due to inconsistent file naming and structure.

Action Items for Next Sprint

- Start with a Git workflow refresher session for all members.
- Define and follow a shared component/file naming convention.
- Begin component integration earlier in the sprint.
- Assign a team lead to review commits and ensure consistency.
